

MEHLER FlexGuard WOMAN'S SOFT BALLISTIC PANEL

Formed expressly to fit the female body, the Mehler FlexGuard Woman's Soft Ballistic Panel is a must-have for every woman in the line of duty. In addition to its uniquely female anatomic shape, the panel offers superb comfort plus Mehler's uncompromising ballistic protection. The panel can be combined with most Mehler Vario System vest models and can be upgraded with the addition of a shaped shock absorber.

BALLISTIC PROTECTION MOULDED TO FIT A WOMAN'S SHAPE.

The Mehler FlexGuard Woman's Soft Ballistic Panel is one-of-a-kind protection for women. It's superbly lightweight and anatomically shaped to fit the contours of the female body, which makes it protection a woman can wear in comfort all day. The panel is different from conventional ballistic panels for women because it is not formed by means of additional stitchwork on the panel. Instead, the panel itself is anatomically moulded to create a streamlined fit.

FEATHERLIGHT BULLET-STOPPING POWER.

At only approximately 3.13* kg/per sqm for VPAM 3 (without "point-blank" shot) and approximately 3.61* kg/per sqm for SK1 (including "point-blank" shot), the Mehler FlexGuard Woman's Soft Ballistic Panel is one of the lightest-weight soft ballistic panels available, which is why wearers feel far less fatigued after wearing it all day and much more comfortable during the entire time they have it on.

** Weight without ballistic insert cover*

UNCOMPROMISING BALLISTIC PROTECTION.

As with all Mehler Vario System ballistic products, the FlexGuard Woman's Soft Ballistic Panel delivers top-of-the-line protection—and of that you can rest assured. Thanks to its special ballistic materials mixture and construction, the panel is guaranteed to withstand threats of up to VPAM 3 or SK1. In addition, the panel can be upgraded with an anatomically formed shock absorber to reduce the depth of trauma when fired at the heart and spine.

A PERFECT FIT FOR ALL SHAPES AND SIZES.

Our commitment at Mehler Vario System is to make sure the ballistic protection vest each female officer receives is perfectly fitted. Beyond offering a choice of multiple standard sizes, we also take additional measurements onsite in order to ensure that every vest is optimally fitted to the individual wearer.

TECHNICAL DATA:

Thicknesses:

- **BP313:** approx. 4.25mm
- **BP361:** approx. 4.35 mm

Weight:

- **VPAM3 (Model BP313):**
approx. 3.13* kg/per sqm
-> approx. 795 grams
for a size M insert rear and front
- **SK1 (Model BP361):**
approx. 3.61* kg / per sqm
-> approx. 895 grams
for a size M insert rear and front

Material:

Polyethylene

Protection level:

Test Level 3 VPAM BSW or Protection Class 1 technical guideline ballistic protective vests

Additional features:

- Pocket for optional shock absorber
- Fixation points
